Q57 What approach are you using to meet the performance standard for Volume, Total Suspended Solids (TSS), and Total Phosphorus (TP) as required by the Permit? [Part III.D.5.a.(2)] Check all that apply.

- Retain a runoff volume equal to one inch times the area of the proposed increase of impervious surface on-site
- Retain the post-construction runoff volume on site for the 95th percentile storm
- Match the predevelopment runoff conditions
- Adopt the Minimal Impact Design Standards (MIDS)
- An approach has not been selected
- X Other method (Must be technically defensible - e.g., based on modeling, research and acceptable engineering practices)

We generally require developers to match pre-development conditions for rate (atlas 14), annual runoff volume, and annual TP/TSS loads. Exceptions are resource specific and more stringent on total phosphorus.

Partnerships

Q78 Did you rely on any other regulated MS4s to satisfy one or more Permit requirements?

Yes

Q79 If ‘Yes’ in Q78, describe the agreements you have with other regulated MS4s and which Permit requirements the other regulated MS4s help satisfy: [Part IV.B.6.]

SWWD is a member of EMWREP upon which it relies to satisfy some requirements of MCMs 1, 3, and 6. Information at www.mnwc.org/emwrep/. Consistent with MN Rule 8410, each Municipality in the District must maintain a local water management plan and local controls that are in conformance with SWWD’s Watershed Management Plan and Rules. SWWD relies on this legal partnership to satisfy some requirements of MCMs 4 and 5. All stormwater entering SWWD’s owned and operated system originates and is delivered by municipal MS4s. Because all inflows into SWWD’s system come from Municipal MS4s we expect them to meet all permit requirements. SWWD does assist those municipalities with ESC inspections. Violations identified during inspections are followed up on by City staff.

Optional Question

The MPCA is attempting to identify potential sources of water quality data. Answering this question will help the MPCA and interested stakeholders obtain a more comprehensive understanding of sources of data that may be shared and ultimately aid in understanding the extent to which stormwater management practices result in water quality improvements.

Q84 Are you collecting water quality data (e.g., from surface waters, outfalls, best management practices, etc.) that is not associated with a waste water treatment plant?

Yes
